

AMENDMENT

Please amend the claims as follows, without prejudice.

In the Claims:

1. (Currently Amended) A packaging surface element (1) for adhesive goods (6) or goods containing adhesive means, wherein the packaging surface element (1) has a non-adhesive coating (11, 12) at least partially on its inner wall (2, 3) wherein the non-adhesive coating is simultaneously a sealable coating (4,5) consisting of a combination of a sealable material and a non-adhesive agent (abherent).
- 2.-5. (Canceled)
6. (Currently Amended) The packaging surface element according to claim 5 1, wherein the combination is provided as admixture or as a flat design.
7. (Currently Amended) The packaging surface element according to claim 5 1, wherein the sealable material is a heat-sealable material, preferably polyethylene and the non-adhesive material is silicone or polydimethyl siloxane PDMS.
8. (Canceled)
9. (Canceled)
10. (Previously Presented) The packaging surface element according to claim 1, wherein the non-adhesive coating (11, 12) is based on silicone or polysiloxane, preferably polydimethyl siloxane (PDMS), or metal, preferably a metal vapour deposition.
11. (Previously Presented) The packaging surface element according to claim 1, wherein the non-adhesive coating (11, 12) is based on at least one halogenated hydrocarbon polymer.
12. (Currently Amended) A packaged transdermal system (21), wherein the system comprises

- a transdermal system (22) comprising a supporting layer (23), a matrix (24) and a removable covering layer (25), wherein the covering layer (25) is a non-adhesive layer and is at least at its circumference (26) sealable, and
- a packaging surface element (27) which is provided with a non-adhesive coating on its inner wall and is sealable at least at its circumference (28),
- wherein the non-adhesive coating is simultaneously a sealable coating consisting of a combination of a sealable material and a non-adhesive agent (abherent), and
- wherein the transdermal system (22) and the packaging surface element (27) are sealed ~~with~~ to each other at least at their circumferences (26, 28).

13. (Currently Amended) The system according to claim ~~12~~ 6, wherein the matrix (24) is selected from the group consisting of a self-adhesive matrix and a matrix provided with an adhesive.

14. (Canceled)

15. (Currently Amended) A packaged transdermal system (31), wherein the system comprises a supporting layer (33), a matrix (34) and a removable covering layer (35), wherein the covering layer (35) is a non-adhesive layer and simultaneously a sealable layer consisting of a combination of a sealable material and a non-adhesive agent (abherent) and, extends circumferentially beyond the matrix (34) to such an ~~extend~~ extent that it can be folded such that ~~one~~ a first wing (36) of the folded covering layer (35) carries the matrix (34) with supporting layer (33) and ~~the other~~ a second wing (37) covers the first wing (36), and wherein the covering layer (35) is at least at the edge (28) of its circumference sealable.

16. (Currently Amended) The system according to claim ~~15~~ 8, wherein the matrix (34) is selected from the group consisting of a self-adhesive matrix and a matrix provided with an adhesive.

17. (Previously Presented) A packaging surface (14) with packaging surface elements (1) according to claim 1, wherein the spacings of the non-adhesive coatings (11, 12) are marked by recurring markings or recurring marks (15).
18. (Currently Amended) The packaging surface according to claim ~~47~~ 10, wherein the recurring marks are registration marks or pressure marks.
19. (Currently Amended) The packaging surface according to claim ~~47~~ 10, wherein the pressure marks (15) are periodic, recurring marks spaced in accordance with the sequence of packaging surface elements (1) to be sealed, or wherein the distance of neighbouring periodic, recurring marks corresponds to a packaging surface element (1) to be sealed.
20. (Currently Amended) The packaging surface according to claim ~~47~~ 10, wherein the marks (15) are punched marks or color marks.
21. (New) A patch comprising a packaging surface element (1) for adhesive goods (6) or goods containing adhesive means, wherein the packaging surface element (1) has a non-adhesive coating (11, 12) on its inner wall (2, 3).
